High Performance Milling

MEV NEW

New Generation of High Performance, Economical, Multi-functional Milling Cutters

Newly Developed Triangle Inserts Provide Numerous Solutions to Machining Challenges

- High Performance - Low cutting forces and Higher Rigidity for Excellent Chatter Resistance
- Economical - Longer Insert and Holder Tool Life
- Multi-functional - Can be Used in Shouldering, Slotting, and Ramping Applications

NEW End Mill (Long Shank Type), Face Mill Added to Lineup

New Triangular Insert Design

High Performance Milling

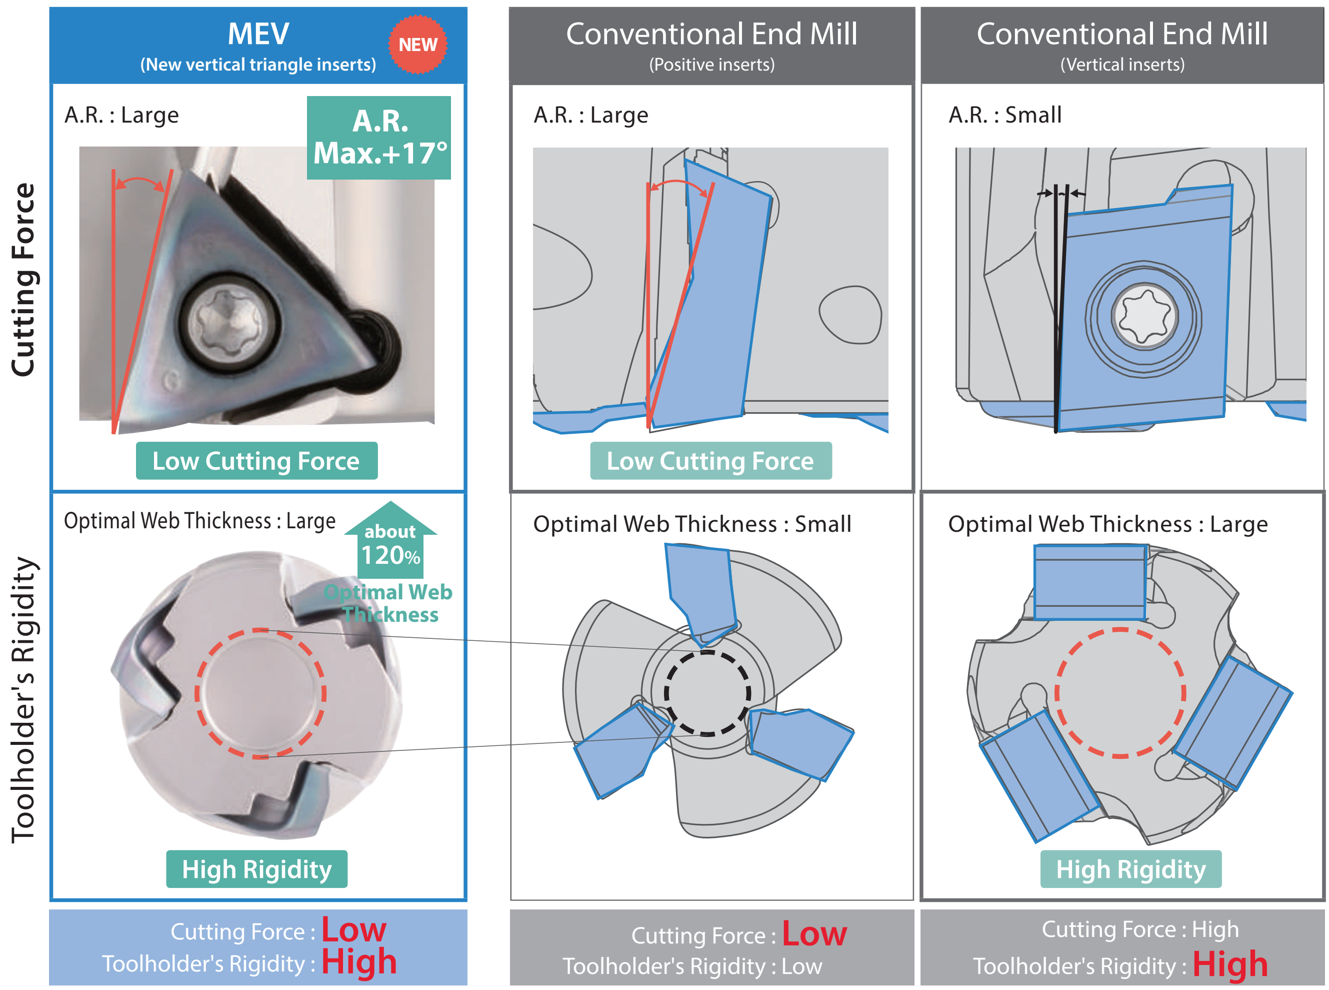
MEV

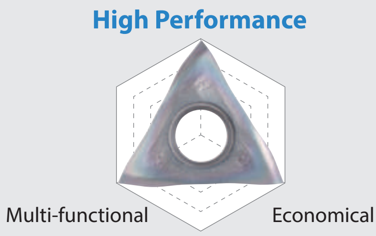
Newly Developed Triangular Inserts for Provide Low Cutting Forces and Increased Rigidity
High Performance, Economical, and Multi-functional Milling Solutions

1 High Performance: Low Cutting Force and High Rigidity

Newly developed vertical triangle inserts with 3 cutting edges
Achieve stable machining with reduced chattering

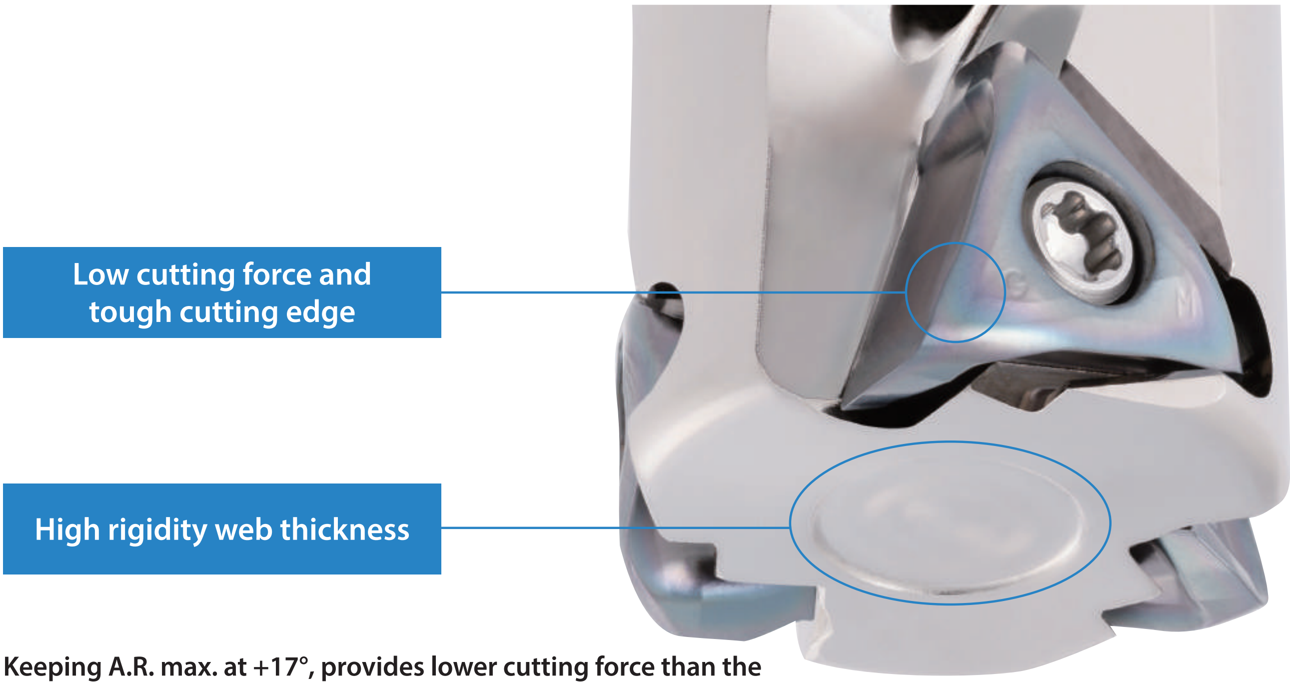
MEV vs Competitor





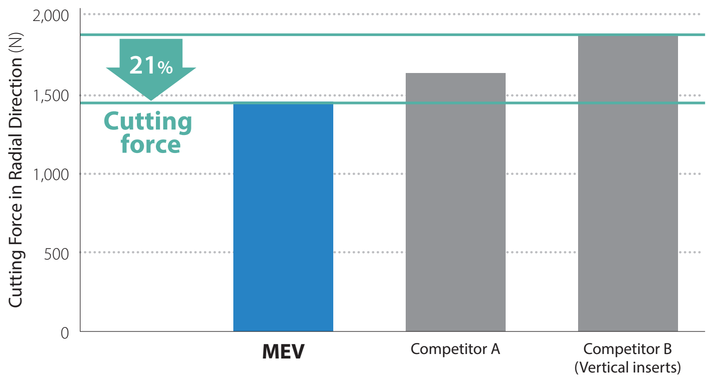
The MEV's large A.R. produces lower cutting forces and the vertical triangle inserts provide a higher rigidity.

The great performance of the multi-purpose MEV triangle inserts combines both advantages of conventional positive and negative type inserts.



Keeping A.R. max. at +17°, provides lower cutting force than the positive insert types of competitors

Cutting Force Comparison (Internal evaluation)

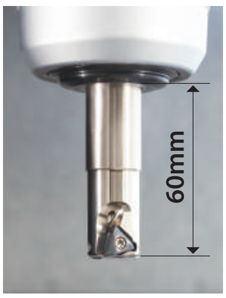


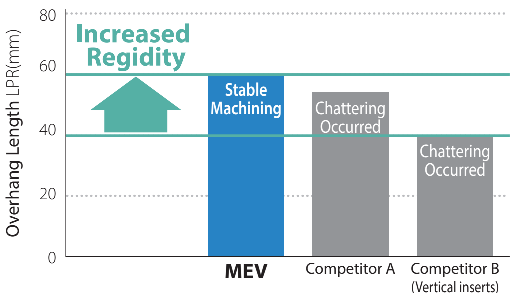
Cutting conditions : Vc = 200 m/min, ap × ae = 3 × 18 mm, fz = 0.10 mm/t, ø20 (3 inserts), Dry Workpiece : SCM440 Ⓗ

Low cutting force and large optimal web thickness provides excellent chattering resistance

Chattering Resistance Comparison (Internal evaluation)

Shouldering





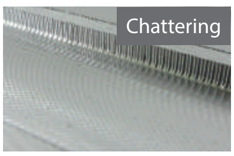
Cutting conditions : Vc = 200 m/min, ap × ae = 3 × 18 mm, fz = 0.10 mm/t, ø20 (3 inserts), Dry Workpiece : SCM440 Ⓗ

Slotting

MEV

Competitor A

Competitor B
(Vertical triangle inserts)



Cutting conditions : Vc = 220 m/min, ap = 3 mm (Slotting), fz = 0.10 mm/t, ø20 (3 inserts), Dry Workpiece : SCM440 Ⓗ

Provides excellent surface finish and superior cutting accuracy of the wall

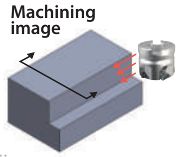
Surface Finish Comparison (Internal evaluation)

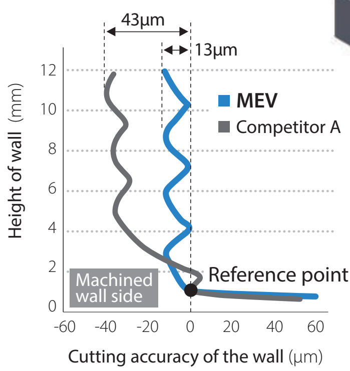
MEV Competitor A

Cutting conditions : Vc = 180 m/min, ap × ae=3 × 40mm, fz = 0.1 mm/t, ø50 (5 inserts), Dry Workpiece : S50C

Cutting accuracy of wall example
(Internal evaluation)

Machining image





Cutting conditions : Vc = 200 m/min, ap × ae=3 × 10mm (4 pass), fz = 0.15 mm/t, ø50 (5 inserts), Dry Workpiece : S50C

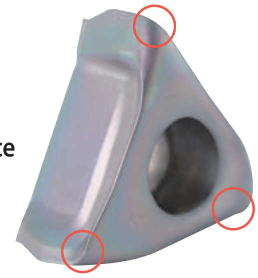
*Accuracy of the wall surface varies depending on cutting conditions, machining environment, and insert combination.

2 The Economical Choice: Lengthened Insert Life with 3 Usable Cutting Edges

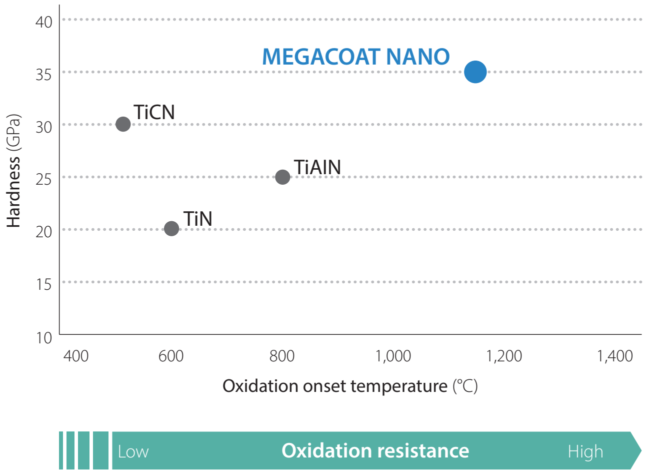
Insert

Unique triangle inserts with 3 cutting edges

PR15 series utilizes excellent MEGACOAT NANO coating technology with wear and adhesion resistance

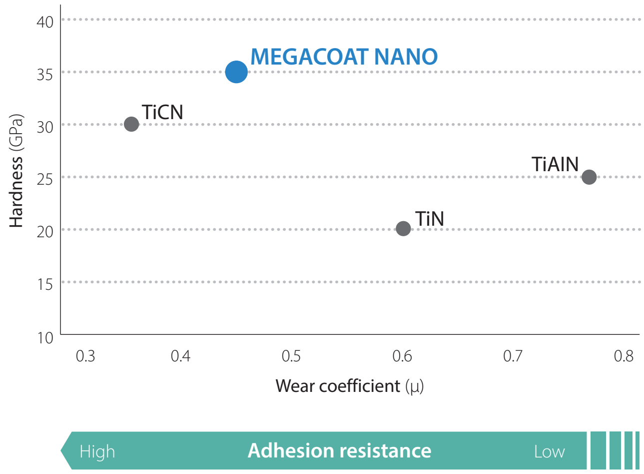


Coating Properties (Abrasion resistance)



Achieve long tool life with the combination of a tough substrate and a special Nano coating layer

Coating Properties (Adhesion resistance)



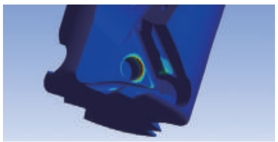
Stable Machining with Excellent Wear Resistance

Toolholder

Engineered with state-of-the-art simulation and analysis technology, the MEV is built to reduce cutting stress on the cutter body

Increased hardness and wide contact surface for improved durability

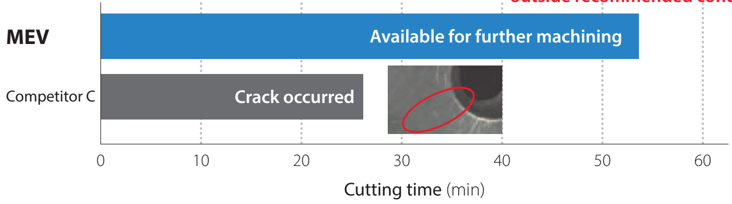
Simulation and analysis (image)



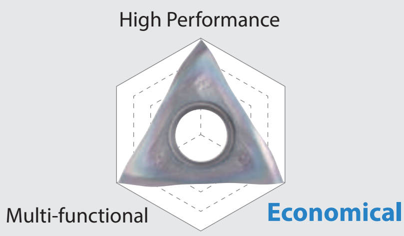
Prevents breakage from toolholder with decreased max. cutting stress

Toolholder Durability Comparison (Internal evaluation)

*Comparison at high feed rate outside recommended conditions



Cutting conditions : Vc = 120 m/min, ap × ae = 5 × 7.5 mm, fz = 0.25 mm/t, ø20 (1 insert), Dry Workpiece : SCM440 Ⓗ

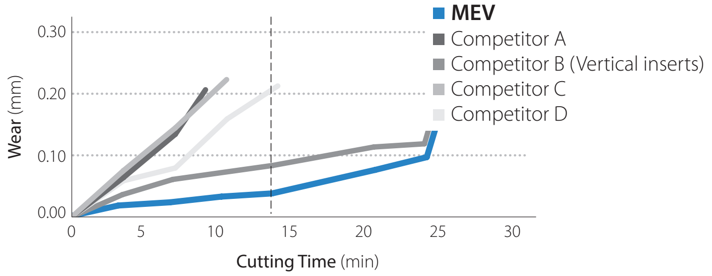


3 cutting edges combined with PR15 series MEGACOAT NANO coating technology maintains long tool life

Improved toolholder toughness and durability

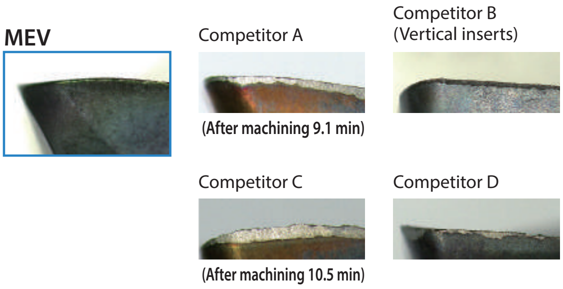
Long Tool Life with Excellent Wear Resistance

Wear Resistance Comparison (Internal evaluation)



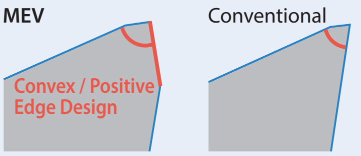
Cutting conditions : Vc = 180 m/min, ap x ae = 3 x 10 mm, fz = 0.1 mm/t, ø20, Dry Workpiece : SKD11 (30~35HS)

Cutting Edge (After machining 14 min)



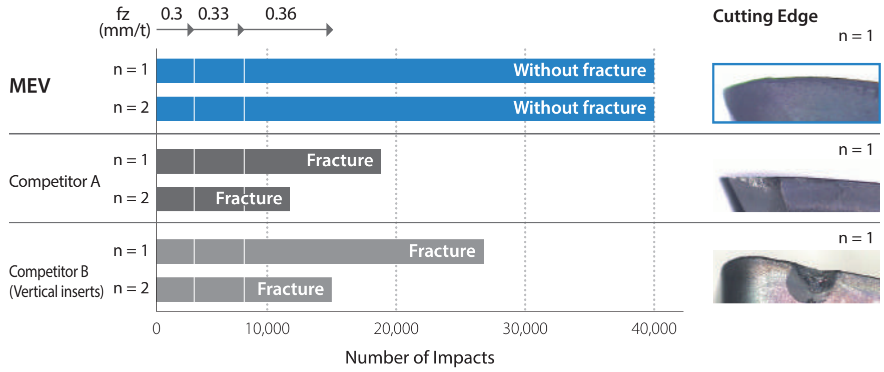
Improved Stability with Superior Fracture Resistance

Cutting edge cross-section



The MEV features a larger cutting edge to increase strength

Wear Resistance Comparison (Internal evaluation)



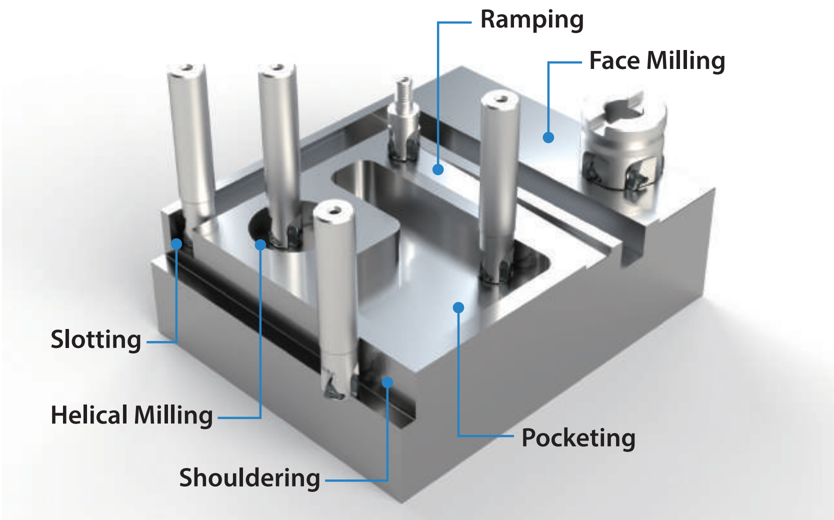
Cutting conditions : Vc = 120 m/min, ap x ae = 2 x 10 mm, fz = 0.3 - 0.36 mm/t, ø20 (1 insert), Dry Workpiece : SCM440 Ⓗ (37~39HS)

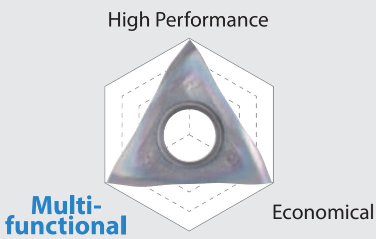
3 Multi-functional: The MEV can perform a wide variety of machining processes

Great performance in shouldering, slotting, and ramping applications (D.O.C. 6 mm or less)

Chip Example (Slotting)

Cutting conditions : Vc = 150 m/min, ap = 6 mm (Slotting)
fz = 0.2 mm/t, ø20 (3 insert), Dry Workpice : SS400





Good chip evacuation with a unique insert chipbreaker design

Stable machining in applications like slotting and ramping where chip recutting issues are common

● : Standard Stock

Caution with Max. Revolution
Set the number of revolutions per minute within the recommended cutting speed specified by the workpiece on page P9.
Do not use the end mill or cutter at the maximum revolution or higher since the centrifugal force may cause inserts and parts to scatter even under no load.
Coat anti-seize compound thinly on portion of taper and thread prior to installation.

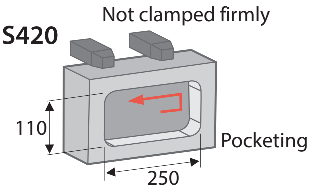
Case study

Parts for machinary SUS420



Vc = 180 m/min
ap × ae = 1 × ~50 mm
fz = 0.1 mm/t Dry
MEV50-S32-06-5T (5 inserts)
TOMT060508ER-GM PR1535

Cutting time

MEV Vf=575 mm/min

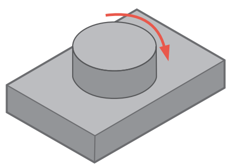
Competitor E Vf=350 mm/min

Machining Efficiency x1.6

Quiet machining even when cutting speed increased.
The MEV shows 1.6 times machining efficiency and good bottom surface finish.

(User evaluation)

Plate SS400



Vc = 180 m/min
ap = 3 mm
fz = 0.14 mm/t Dry
MEV22-S20-06-3T (ø22-3 inserts)
TOMT060508ER-GM PR1525

Number of parts produced

MEV 160 pcs/corner

Competitor F 65 pcs/corner

Tool life x2.4

The MEV achieved 2.4 times longer tool life than competitor F.
Quieter machining with excellent surface finish.

(User evaluation)

The number in **bold font** is recommended starting conditions. Adjust the cutting speed and the feed rate within the above conditions according to the actual machining situation.
Set the cutting speed and feed rate for wet machining to 70% in the table above.
For high-speed machining, set the feed rate in the table above to 70% (When the cutting speed increases more than the center value of the recommended condition).
Cutting with coolant is recommended for Precipitation Hardening Stainless Steel, Ni-base Heat Resistant Alloy and Titanium Alloy.
Cutting with coolant is recommended for finishing.
Regularly changing the clamp screw is recommended. This is because the clamp screw may be damaged by long-term use or machining under high cutting conditions as shown in the table above.

Ramping Reference Data

Description	Cutter Dia. DC (mm)	20	22	25	28	30	32	40	50	63~
MEV… -06- …	Max. Ramping Angle RMPX	1.00°	0.80°	0.65°	0.60°	0.55°	0.50°	0.40°	0.30°	Not recommended
	tan RMPX	0.017	0.014	0.011	0.010	0.010	0.009	0.007	0.005	

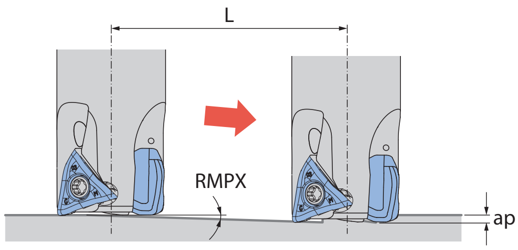
• Make ramping angle smaller if chips are too long.

Ramping Tips

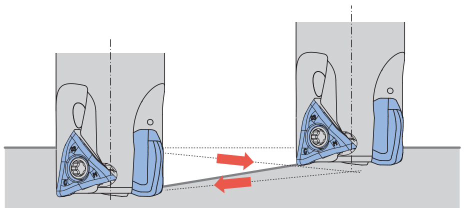
• Ramping angle should be under α max (maximum ramping angle) in the above cutting conditions.

• Reduce recommended feed rate in cutting conditions less than 70%.

Formula for Max. Cutting Length (L) at Max. Ramping Angle $L = \frac{ap}{\tan RMPX}$



• For two-way ramping, the ramping angle should be half of RMPX.

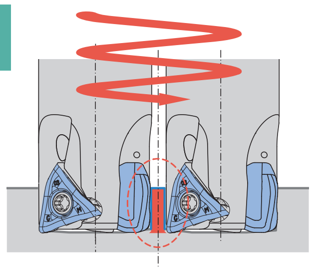


Helical Milling Tips

For helical milling, use between min. drilling dia. and max. drilling dia.

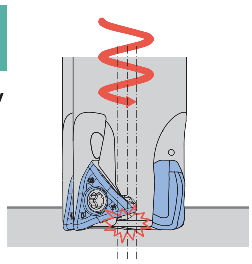
Exceeding max. machining dia.

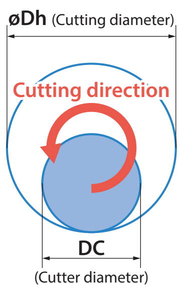
Center core remains after machining



Under min. machining dia.

Center core hits holder body



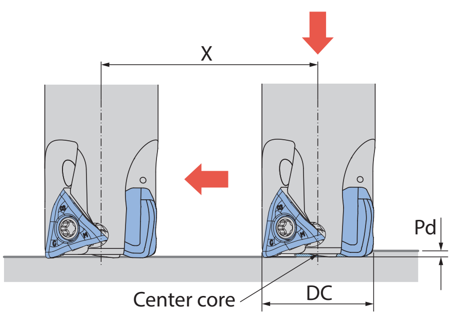


Unit : mm

Description	Min. Cutting Dia.	Max. Cutting Dia.
MEV… -06- …	2×DC−5	2×DC−2

For helical milling, use between min. drilling dia. and max. drilling dia.
Keep machine depth (h) per rotation less than max. ap (S) in the cutter dimensions chart.
Use caution to eliminate incidences caused by producing long chips.
Cutter dia. ø63 and above are not recommended for helical milling.

Drilling Tips



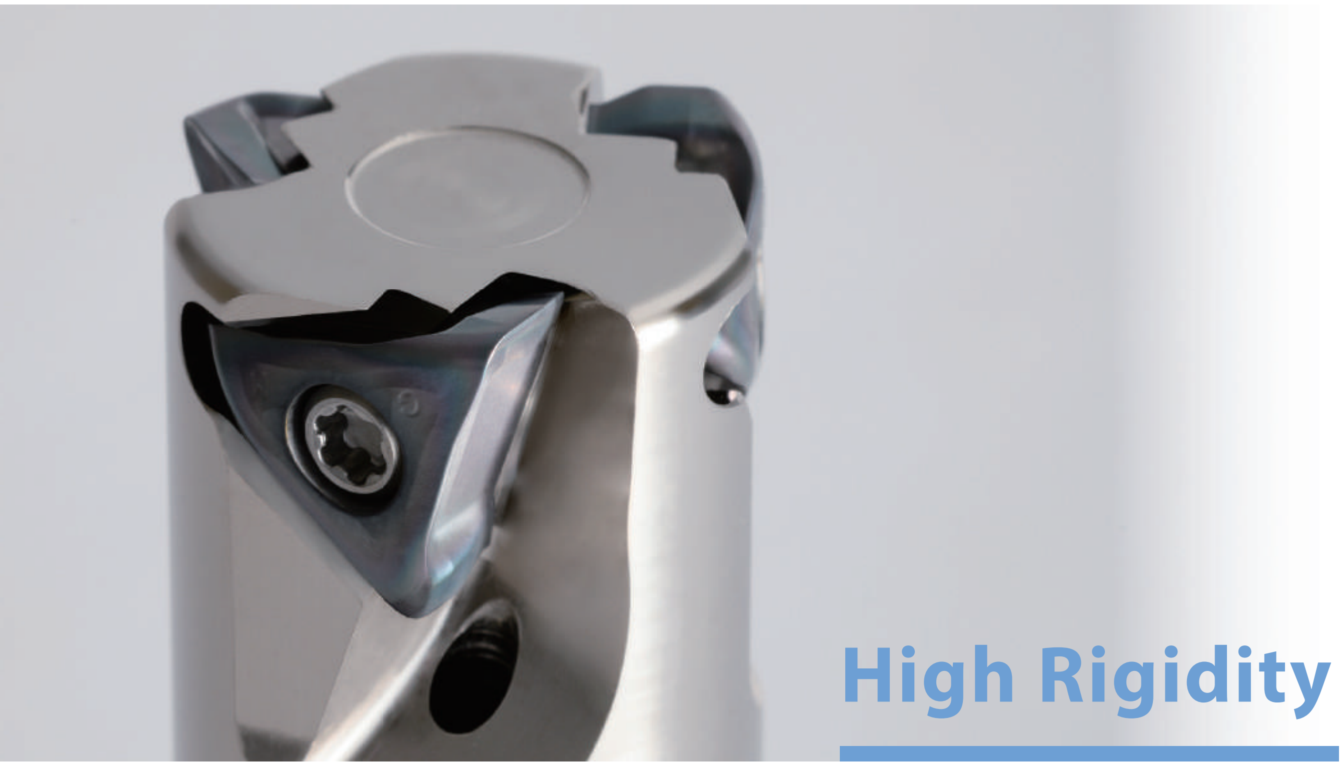
Unit : mm

Description	Max. Drilling Depth Pd	Min. Cutting Length X for Flat Bottom Surface
MEV… -06- …	0.25	DC–3

It is recommended to reduce feed by 25% of recommendation until the center core is removed when traversing after drilling.

Axial feed rate recommendation per revolution is f < 0.1mm/rev.

Low Cutting Force



High Rigidity
